

FENCE POST CLIPS

INSTALLATION GUIDE

THE JIO™ LONGLIFE FENCE POST CLIPS ARE MADE FOR USE WITH THE NEW JIO STAR AND JIO MAXY POSTS

1.

Place the clip in your palm to distinguish the short and long legs of the clip.

2.

Hold clip vertically against the wire with long leg on top and short leg on the bottom. Roll the clip 90° to the right, to ensure the wire falls into the big loop at the end of the clip.

3.

Twist a further 90° to the right to ensure that the long leg is now on the bottom and short leg on top.

*Please be aware that the JIO Longlife fence post clip can be placed with the long or the short leg on the top or bottom.

However when installing, the short leg **MUST** be clipped in first to ensure the ease of clipping the long leg into place.

4.

Pop the short leg into the top hole on the left side of the post stalk.

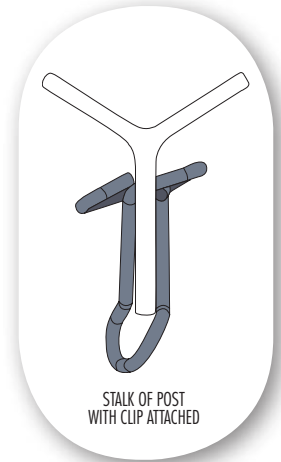

5.

Pull the long leg over to the right side of the post stalk and push downwards into the bottom hole until you hear a reassuring click.

6.

The clip is now in place.

Innovative clip design

The simple design provides more attachment points on the fence post and superior alignment along the fence line. The clips consistent wire attachment is up to 20% faster than the previous GalStar Longlife® fence post clips.

Longlife Blue® coating

The JIO™ Longlife fence post clips are made from Waratah's signature Longlife Blue colour® coating offering exceptional corrosion protection in all weather conditions. All Waratah products undergo a quality control process to ensure consistency and quality.

THE JIO™ LONGLIFE FENCE POST CLIPS ARE MADE FOR USE WITH THE NEW JIO STAR AND JIO MAXY POSTS

The Waratah JIO fence posts are stronger and more ductile with more attachment options than the original Waratah Post, delivering easier to erect, longer lasting fences that require less maintenance.
